

Web-based Centralized Time and Attendance & Payroll Software

AiTIME is a comprehensive time and attendance management software designed to integrate seamlessly with various biometric devices such as those from ZKTeco, HIKVISION, and DAHUA. Key features include:

Device Connectivity: Supports Ethernet, WIFI, 3G/4G connections to standalone push communication devices, providing reliable communication with thousands of devices.

Private Cloud: Acts as a private cloud, offering employee self-service via mobile applications and web browsers. User Interface: Intuitive interface to manage timetables, shifts, and schedules, simplifying attendance tracking.

Reporting: Generates quick attendance reports with roster and overtime management, making employee scheduling more efficient.

Dashboard: Modern dashboard for real-time monitoring of attendance summaries, device status, and request approvals (approved/rejected/pending).

API Integration: Built-in API for connecting to third-party software.

Overall, AiTIME is designed to streamline attendance and workforce management across various industries.

KEY FEATURES

Organization Management

- Add and manage multiple organizations.
- Assign roles and permissions.
- Define branches for each organization.

User Access Control

- Define user roles and permissions.
- Restrict access to specific features based on roles.
- Maintain a secure system with authentication

Customized Reporting

- Generate reports tailored to customer needs, such as attendance, shift patterns, and productivity.
- Specific reports for 12-hour shifts, providing detailed insights into shift performance and coverage.
- Export reports in various formats (PDF, Excel, etc.) for easy sharing

Interactive and dynamic dashboard

- Interactive and dynamic dashboard displaying:
 - Daily, Weekly Monthly summary
 - Live Transactions
 - Present, Absent Overview
- Customizable widgets to provide a user-friendly experience.

Schedule Management

- Create and manage employee schedules, accommodating different working hours and patterns.
- Integrate leave requests and approvals into the scheduling process.
- Provide real-time updates to employees regarding their schedules and any changes.

Timetable Creation

- Support for various time intervals, such as 12-hour shifts or custom time periods.
- Identify and resolve scheduling conflicts, ensuring no overlaps.

Shift Management

- Allocate shifts to employees based on their roles, availability, and preferences
- Implement rotation schedules to ensure fair distribution of work among employees.
- Allow employees to request and manage shift swaps with approval workflows.

Payroll Management

- Set up payroll structures, tax deductions, bonuses, overtime pay, and other compensation rules.
- Generate payroll based on employee attendance, shift data, and leave records.
- Create and distribute detailed payslips to employees in multiple formats (PDF, email, etc.).
